

Water Bath LPG Vaporizers

with "Smart" Liquid Carryover Protection

08-Series

WB-458 in standard Configuration

05-Series

WB-2505 with standard Extended Control Room (Maintenance House)

- Capacities 168 gph to 10000 gph (322 kg/h to 20 metric tons per hour)
 - For Propane, Butane, and other LPG
 - Forced Draft Power Burners
 - Low-Fire/High-Fire Modulation
 - Small Footprint, High Efficiency
 - Conforms to ASME, NFPA, PED/CE
 - FM approved, CE Mark available
 - Heavy-Gauge Steel Construction
 - All-Welded Design
 - Step-in Control Room for small models
 - Walk-in Control Room for larger models
 - PLC Controls with First-Out Monitor
 - Color LCD Touch Screen
- Many Standard Options:
 - ⇒ Extended Control Room (Maintenance House)
 - ⇒ Remote Monitoring and Operation (Ethernet) via Web Browser
 - ⇒ Integration with LPG/Air Mixers for Standby Systems and PeakShaving Systems
 - ⇒ Siemens or Allen-Bradley PLC
 - ⇒ High-Pressure up to 400 psi
 - ⇒ Integration into Plant Monitoring
 - ⇒ Wireless Access
 - ⇒ Multi-Language Operator Interface
 - ⇒ Control Room with Heater and A/C

What are LPG Vaporizers ?

LPG vaporizers are actually boilers. Instead of boiling water, they boil propane, butane, or another LPG (Liquefied Petroleum Gas). It may sound strange that heat is required to vaporize LPG when Propane will boil at -44°F (-42°C) and Butane at 32°F (0°C), but, when LPG vaporizes by expansion alone, it causes a refrigeration action. In applications with high LPG flow, the uncontrolled vaporization could freeze pipe, valves, regulators, and even burner nozzles. Therefore, controlled heat input is required to offset the refrigeration action.

Standard Features and Options 05-Series and 08-Series

- Multi-Pass Steel Burner Tube.
- Multi-Pass High-Efficiency LPG Vapor Tube with welded heat transfer fins, rated for 250 psig @ 650 °F.
- Designed and manufactured per ASME Pressure Vessel Code, Section VIII, Division 1, and NFPA 58.
- Fully Integrated Power Burner with Electronic Flame Safeguard.
- Water Circulation Pump with internal Diffuser.
- All models are FM approved. CE Approval available.
- “Smart” Liquid Carryover Protection.
- UL listed Safety Pressure Relief Valve.
- UL listed Solenoid Valve (Liquid Inlet).
- Safety Relays for Performance Level 3 (SIL 4)
- Vaporizer Control Panel with PLC and First-Out Monitor.
- Electronic Thermostat standard on all 05-Series models
- Factory Primed, Painted, and Tested.

Options:

- ASME “U” Stamp for Vaporization Tubes
- High-Pressure Heat Exchanger
- Custom Control Panels and System Integration
- Remote Monitoring and Control (Ethernet)
- Control Panel with UL 508 A certification
- Wireless Access
- Large-Screen Operator Interface

Standard Control Panel with Siemens S7-1200 PLC, Safety Relays, automatic circuit breakers, Ethernet Router, and Honeywell Flame Safeguard.

Applications

AES Water Bath Vaporizers have been manufactured since 1974 and have seen continuous design improvement. This has led to probably the most versatile and most reliable line of Water Bath Vaporizers on the market today. AES currently manufactures the 08-Series for capacities from 168 gph (322 kg/h) to 508 gph (1000 kg/h); and the 05-Series for capacities from 455 gph (873 kg/h) to 10000 gph (20 metric tons per hour).

Installations around the world include Peak Shaving Plants for Gas Utilities, Standby Plants for large industrial users, Backup Systems for government and defense installations, Primary Fuel Source for areas without natural gas supply or for areas preparing for connection to natural gas, Power Plants, Glass and Brick Manufacturing, Chemical Plants, Food Processing, etc.

AES Water Bath Vaporizers can be used “stand-alone”, or in combination with LPG/Air mixing systems, producing gas which is directly interchangeable with natural gas.

How do Alternate Energy Systems' Water Bath Vaporizers work ?

Water Bath Vaporizers are available in standard capacities from 168 gallons per hour (gph), to 10,000 gph. From the outside, they differ primarily in their size. Inside, the burner capacity, the amount of heat exchange medium, and the active heat exchange areas of the vapor tube and the burner tube also determine their vaporization capacity.

The drawing below shows a typical configuration of a 1000 gph vaporizer. The main components of the vaporizer are the Burner Tube (D) with the Exhaust Stack (A), the Vapor Tube (B) with Welded Fins (C), the Steel Shell (K) with the integral Burner and Control Room (Q), the Liquid Inlet Train (F, G, I, J), the Vapor Outlet Header (E) with "Smart" Liquid Carryover Protection (K, L), and the Gas Train (H, W) for the Power Burner (Z).

Also shown on the drawing are the Water Tank Insulation (O), the Outer Sheet Metal Shell (N), the Vaporizer Control Panel (T), the Main Fuel Gas Valve (W), the Water Circulation Pump (U), and the controls for Water Bath Temperature (X) and Low Water Level (R).

The Burner Tube and the Vapor Tube are fully immersed in a heat transfer solution (water/anti-freeze). LPG vapor from naturally occurring vaporization is taken from the Vapor Outlet Header (E) and fed through a Pressure Regulator (H) to the Burner (Z). The Burner heats the heat transfer solution through the Burner Tube (D). Adjustable temperature controls (X) maintain a constant water temperature. The heat from the water is transferred through the Vapor Tube (B) to the LPG, which then evaporates and exits the system through the Vapor Outlet Header (E). The Sensor of a Temperature Transmitter (K) is inserted deep into the Vapor Outlet Header (E). Its signal is processed together with the signal from a dedicated pressure transmitter (L) by the "smart" Liquid Carryover protection function. "Smart" constantly compares the pressure and temperature signals against the vapor pressure/temperature saturation curve of the LPG that is being vaporized. The properties of the LPG (Propane/Butane percentage), and the "safety margin" (how close the pressure/temperature are allowed to come to the saturation curve) can be entered through the operator interface. If the safety margin is "breached", the liquid inlet solenoid valve (J) is closed after an adjustable alarm delay period has elapsed. This prevents liquid from being carried over to the distribution system.

The signal from the vapor temperature transmitter is also used to keep the Liquid Inlet Valve closed until the LPG vapor at the vaporizer outlet has reached an adjustable minimum temperature.

Other components in the Liquid Inlet Train are the manual Liquid Shutoff Valve (F), the Strainer (G), and the Check Valve (I), allowing excess LPG pressure in the Vapor Tube to vent back through the liquid supply line into the storage tank.

The insulation of the water bath tank and the thorough corrosion protection allow the vaporizer to be installed outside without any further weather protection.

Specifications - 08-Series - WB-168 to WB-508

Cut-Away of a 08-Series Vaporizer

Safety Relays for Performance Level 3 (SIL 4)

In recognition of already implemented international standards, and in anticipation of future US-requirements, all AES vaporizers of the 08-Series and the 05-Series are now equipped with three Agency-approved Safety Relays (per EN ISO 13849-1).

Safety Relays are self-diagnosing, self-monitoring, dual-redundancy, dual-channel electronic devices that monitor two inputs from fail-safe safety-circuits. If any of the monitored channels detect a problem, the output of the safety relay is immediately turned OFF.

In 08-Series and 05-Series vaporizers the outputs of all safety relays must be energized before the Burner can be started, or the Liquid Inlet Valve can open. If one or more outputs of the safety relays are de-energized while the Burner is operating, or while the Liquid Inlet Valve is open, the burner is stopped and the Liquid Inlet Valve is closed.

The use of Safety Relays elevates the safety of AES vaporizers to "Performance Level 3" (SIL 4).

Configuration of Safety Relays in 08-Series and 05-Series:
 Relay 1 Low Water Level High Bath Temperature
 Relay 2 GLM, 40% LEL GLM, Sensor Trouble
 Relay 3 ESD Loop 1 (local) ESD Loop 2 (external)

AES uses Safety Relays manufactured by Siemens, Pilz, Allen-Bradley, and other manufacturers that carry the required Agency-Approvals.

GasLeak Monitors

All AES vaporizers of the 08-Series and the 05-Series are equipped with GasLeak Monitors (GLM) with long-life infrared sensors (expected life 10+ years) in the Vaporizer Control Room. The GLM in 05-Series Vaporizers issue a Warning Alarm if gas levels above 20% LEL (Lower Explosive Limit) are detected. All GLM (05-Series and 08-Series) trigger a System Shutdown Alarm if the gas concentration reaches 40% LEL, or if the self-diagnostics of the GLM detect a sensor failure.

All GLM have a backlit local status display that shows the current gas level (see picture). 05-Series vaporizers repeat the LEL display at the Electronic Operator Interface.

Alternate Energy Systems has selected the Dräger Polytron 2 XP as our standard GLM for its superior quality and reliability. All setup and maintenance can be performed without opening the transmitter or declassifying a hazardous area. An available infrared remote control, beaming through the window, gives full access to the menu and calibration procedure. The menu can also be accessed using the built-in push buttons, or a HART hand held terminal. All menu items and messages are displayed in plain English.

Outputs	Local / Control Panel	Display	20% LEL	40% LEL	Trouble	Analog
08-Series Vaporizer		local	local	both	both	NO
05-Series Vaporizer		both	both	both	both	both

LPG with High Butane Content or Low Liquid Temperature

The vaporization capacity of all vaporizers in this brochure is given for "HD-5" commercial Propane at 0°F (-18°C), for pressures up to 200 psi (14 bar).

If the lowest expected ambient temperature is below 0°F (-18°C), or if the Propane content in the LPG is less than 80%, more heat is required to vaporize the LPG.

When more heat is required for the desired vaporization rate, the burner capacity and the heat transfer area must both be increased. In most cases, our vaporizers can be re-configured without changing their physical dimensions.

Please make certain that you include all relevant operating parameters with your request for quotation. This includes LPG composition, lowest expected ambient temperature, and required discharge pressure.

Examples: Apprx. heat input to vaporize 1000 gal (2000 kg) LPG at 50 psi (3.5 bar) (Superheat 30°F / 16°C - Heat Exchanger Efficiency 80%)

Ambient (Liquid) Temperature	Burner Input	100/0 P/B	70/30 P/B	50/50 P/B	30/70 P/B	0/100 P/B

Standard PLC / EOI			Siemens S7-1200 PLC; high-resolution Color LCD Touch Screen (800x480); Ethernet Interface; 30-hr Trend Recording.										
Optional PLC / EOI			Siemens S7-1200 PLC; Siemens 6" Color LCD Touch Screen; Ethernet Interface; long-term Trend Recording on Memory Card; Remote Access and Control via standard Web Browser (Internet Explorer; FireFox; etc.).										
Optional PLC / EOI			Allen-Bradley MicroLogix-1100 PLC with Ethernet Interface; 4.3" high-resolution Touch Screen (480x272); 30-hr Trend.										
Optional PLC / EOI			Allen-Bradley MicroLogix-1100 PLC with Ethernet Interface; 7" high-resolution Touch Screen (800x480); 30-hr Trend.										
Optional PLC / EOI			Allen-Bradley MicroLogix-1100 PLC with Ethernet Interface; 6" PanelView-Plus Touch Screen (320x240); 30-hr Trend.										
Electrical Requirements (other Voltages available)			400/480VAC 50/60Hz; 25A Circuit; 3-Phase; galvanically isolating transformer for control power included.										
Circuit Protection			Automatic Circuit Breakers with Manual Reset for all AC and DC Circuits; Main Breaker/Disconnect.										
Design Criteria													
Vaporizer			Designed and manufactured to comply with the latest edition of NFPA Pamphlet 58; FM approved. European CE Mark available. Third-party examination by TÜV Rheinland.										
LPG Heat Exchanger			Designed and manufactured in compliance with Boiler and Pressure Vessel Code Section VIII, Division 1. ASME "U"-Stamp available. CE-marked vaporizers comply with European PED.										
Control Panel			General-purpose wiring, compliant with National Electric Code (NEC; NFPA #70). UL-508A available. CE-marked vaporizers comply with all applicable European Directives.										
Mechanical Construction													
Skid			1/4-inch (6.35mm) Steel Deck Plate on all-welded 6-inch (150mm) Channel Frame with Cross-Members; Lifting Lugs.										
Bath Box			1/4-inch (6.35mm) all-welded steel walls with internal stiffeners and supports for LPG Heat Exchanger.										
Water Circulating Pump			Wet-Cartridge Type Hot-Water Circulator installed inside Vaporizer Control Room. Diffuser in Water Bath.										
Insulation			Mineral Fiber insulation with Aluminum backing on side walls, top plate, and rear wall.										
Bath Box Cover			16-gauge (1.5mm) Sheet Metal Panels, powder-coated (gray RAL 9002).										
Control Room			12-gauge (2.7mm) Sheet Metal, primed and painted (blue RAL 5015 or beige RAL 1015); lockable door.

PLC Control Panels and First-Outage Monitor

All AES Water Bath Vaporizers are equipped with safety controls in accordance with NFPA 58, FM, and/or CE (see specifications on pages 4, 6, and 7). The controls are connected to Agency-approved (EN ISO 13849-1) Safety Relays that are independent of the PLC controls and provide "Performance Level 3" (formerly classified as SIL 4). Safety for the combustion system is provided by the Honeywell Flame Safe Guard.

In addition to the Safety Relays, the vaporizer safety controls are also connected to the PLC, which provides status indication at the Electronic Operator Interface (EOI). All EOIs have a color LCD display with touch screen, and provide operator guidance through intuitive screen layouts and clearly labeled pushbuttons, indicators, numeric displays, etc. The EOIs also provide an Alarm History (First-Out Monitor), and graphic trend recording.

The standard PLC in all AES vaporizers is a Siemens S7-1200 with Ethernet communications interface. The standard EOI is a 7-inch high-resolution TouchPanel with 800x480 color LCD display.

Also available (at no additional charge) is an Allen-Bradley MicroLogix-1100 PLC, combined with a 4.3-inch high-resolution (480x272) color LCD display.

Optional PLC/EOI combinations include:

- ⇒ Siemens S7-1200 with 6-inch (320x240) EOI with built-in Web Server. The Web Server provides remote monitoring (and control, if desired) of the vaporizer via the Internet or a factory-intranet using a regular web browser (Internet Explorer; FireFox; etc.) without the need for any special software.
- ⇒ Siemens S7-1200 with 8-inch (640x480) EOI with built-in Web Server (see above).
- ⇒ Siemens S7-200 with 7-inch high-resolution (800x480) EOI.
- ⇒ Allen-Bradley MicroLogix-1100 with 7-inch high-resolution (800x480) EOI.
- ⇒ Allen-Bradley MicroLogix-1100 with 6-inch (320x240) Allen-Bradley PanelView-Plus EOI.
- ⇒ Allen-Bradley MicroLogix-1100 with 7-inch (640x480) Allen-Bradley PanelView-Plus EOI.
- ⇒ Other PLC/EOI brands (GE 90-30; Bristol ControlWave Micro; Siemens S7-300; Allen-Bradley SLC; Allen-Bradley CompactLogix; etc.) are available as standard options.

Please contact the factory if you require a specific configuration of the control system. All AES Control Panels can be UL-508a stamped!

Standard EOI for Siemens PLC S7-1200 or S7-200, optional for Allen-Bradley PLC MicroLogix-1100: 7-inch high-resolution (800x480) display with first-out monitor (Alarm History) and 30-hour graphic TrendLine recording.

Standard EOI for Allen-Bradley PLC: 4.3-inch high-resolution (480x272) display with first-out monitor (Alarm History) and 30-hour graphic TrendLine recording.

Optional EOI for Siemens PLC S7-1200 or S7-200: 6-inch Siemens Touch Panel with built-in Web Server that allows Remote Monitoring (and Control) via a standard web browser without any special Software.

Optional EOI for Allen-Bradley PLC: 6-inch PanelView-Plus display with first-out monitor (Alarm History) and graphic TrendLine recording. Applications developed for this EOI can also run on a PC with FactoryTalk View ME Station license (for remote monitoring).

Control Room Sizes

All Water Bath Vaporizers have a compartment (vaporizer control room) in the front of the unit, holding burner, burner gas train, vaporizer control panel, temperature controls, water circulation pump, etc. The size of the vaporizer control room varies with the vaporizer size and the space required to accommodate the various sizes of burners and controls.

08-Series (WB-168 to WB-508)

The 08-Series vaporizers have a 48" x 48" (1.22m x 1.22m) Step-in Control Room with two wide-opening access door panels (40"; 1.02m). The access door has louvers for the combustion-air intake, a window-insert, and can be locked.

The control room in 08-Series vaporizers is equipped with light fixture, AC wall outlet, and GasLeak Monitor with long-life infrared sensor (expected sensor life 10+ years).

05-Series (WB-455 to WB-1505) Full-Size Control Room

The smaller 05-Series vaporizers have a 36-inch (0.91m) deep control room with 40-inch (1.02m) wide access door. The access door has a window-insert and can be locked.

The control room in 05-Series vaporizers is equipped with light fixture, country-specific AC wall outlet, and GasLeak Monitor with long-life infrared sensor (expected sensor life 10+ years).

WB-455 to WB-1505 vaporizers are also available with Extended Control Room (see below).

05-Series (WB-1805 to WB-10005) Extended Control Room

The control room of 05-Series vaporizers WB-1805 and above has been extended to a depth of 72 inches (1.83m) to form a Walk-in Maintenance House. This provides additional weather protection for operating and maintenance personnel, and provides additional space for control components such as starters for the motors of liquid transfer pumps etc.

Extended Control Rooms are equipped with light fixture, country-specific AC wall outlet, and GasLeak Monitor with long-life infrared sensor (expected sensor life 10+ years).

Extended Control Rooms are also available as an option for WB-455 to WB-1505 vaporizers.

Country-Specific Configuration

Vaporizers for export customers will be equipped with AC wall outlets and light fixtures that are common in their respective countries.

Wall-Mounted Exhaust Fan, Heaters, Air Conditioning

All Control Rooms can be equipped with a thermostat-controlled fan to improve air circulation in warm climates. They can also be equipped with vinyl-backed insulation, and with electric heaters and/or air conditioning units.

Request Quotation

To Request a Quotation for a vaporizer, use the format below to provide us with basic information about your application. The specifications shown in this brochure and the options shown on the opposite page are only a small selection of all available options — you can substitute (almost) everything with your own preference.

If you are unclear how to specify the system, or if you have any additional questions, please contact us by email at sales@altenergy.com, or by phone at +1 770 487 8596. Once we receive your RFQ, we will respond within one business day with a price and an available manufacturing slot, and within two business days with estimated shipping costs to your location.

EXAMPLE

WB-655	1200	kg/h	30Prop/70But	415V 50Hz	Ext.Contr.Room	A-B PLC	7-inch EOI	ASME U-Stamp	see Notes
Model Number ¹	Capacity ²	Units ³	LPG Type ⁴	Electricity ⁵	Option ⁶	Option ⁶	Option ⁶	Option ⁶	Option ⁷

JEFFCOOL®-P155 Heat Transfer Solution

Water Bath Vaporizers use - as the name implies - water as the heat transfer medium. However, since the heat exchanger components and the bath box of the WB series are manufactured from carbon steel, it is recommended that the heat transfer solution be a mixture of water and an industrial coolant/heat transfer fluid with inhibitors to provide rust/corrosion protection.

Under no circumstances should an automotive grade coolant be used as the heat transfer fluid. Using standard automotive coolant could cause premature deterioration of the heat exchangers.

It is also recommended that the water in the heat transfer solutions be de-ionized. While it is acceptable to use small amounts of standard tap-water to replenish any water that might have evaporated, it is not recommended to use standard tap-water for the initial charge of the water bath. If at all possible, topping-off should be done with pre-diluted solutions at the required system concentration.

Alternate Energy Systems recommends a 50/50 Propylene-Glycol/DI-Water solution for all installations. This mixture will provide burst protection to -60°F (-50°C), and will provide freeze protection to -30°F (-34°C), while providing a maximum of corrosion protection.

Alternate Energy Systems has selected JEFFCOOL® P150 heat transfer fluid (manufactured by Huntsman Corporation, The Woodlands, TX) as our preferred heat transfer solution. We are stocking JEFFCOOL® P150 heat transfer fluid, pre-mixed 50/50 (= P155) with DI-Water, in 55-gallon drums and in 275-gallon totes, and can ship the quantities needed for the initial charge on the same truck as the vaporizer at no, or very minimal, additional shipping charges. If required, we can also provide a small utility pump, complete with suction hose and discharge hose, for the transfer of the JEFFCOOL® P150 heat transfer fluid from the drums or totes to the vaporizer.

AES Part #	Description	Price in US-\$
HTS0055	Jeffcool P155 transfer solution in 55-gallon non-returnable plastic drum (see Note 2)	\$951.00 / drum
HTS0275	Jeffcool P155 heat transfer solution in 275-gallon non-returnable plastic tote with steel-cage reinforcement (see Note 2)	\$4,654.00 / tote
HTS0004	Maintenance Sample Kit, including self-addressed shipping box, pre-labeled sample bottle, weather-proof self-adhesive product installation tag and detailed sampling procedures. Analytical results from the samples will be forwarded by the laboratory directly to our customer.	See Note 1
HTS0005	Utility Pump Kit for the transfer of Jeffcool P155 from the shipping containers to the vaporizer. Kit includes industrial-grade pump for AC110V 60Hz Single Phase (transfer rate approximately 365 gallons per hour); 10-ft. suction hose; 40-ft. discharge hose.	\$723.00

Note 1: Available at no charge to customers who have purchased their Heat Transfer Solution through AES. Contact AES for pricing if your Heat Transfer Solution is not JEFFCOOL®-P155, or if it was not purchased from AES.

Note 2: JEFFCOOL®-P155 is delivered in non-returnable containers. The cost of the containers is included in the price of the Heat Transfer Solution. AES accepts returned containers (freight pre-paid) for recycling and will credit the customer's account \$10.00 for each returned 55-gallon drum, and \$20.00 for each returned 275-gallon tote.

Who is Alternate Energy Systems, Inc. ?

After working for other manufacturers of LPG vaporizers and LPG / air systems for several years, John E. Hallberg founded Alternate Energy Systems, Inc. in 1974 in Peachtree City, located just 20 minutes south-west of the Atlanta airport. He successfully set out to design and manufacture products which were superior to those of his competitors. As a result, AES became very quickly known as the innovative manufacturer of quality products. Soon, the customer list included a representative cross-section of the Fortune 500 companies in the U.S.

Through the years, AES has constantly added new products, and has further improved the design of existing products, keeping us ahead of the competition. Several designs, including those for LPG/Air mixing systems, were awarded national and international patents.

Today, AES is owned by Wolfgang Driftmeier. With his manufacturing background and his experience in sales and marketing, the company focus is clearly on "... offering the best product design, combined with quality workmanship, at a competitive price, to the full satisfaction of our customers, at all times ...".

AES is committed to serving customers in the U.S. through a network of sales specialists, technical support personnel, distributors and installers, and international customers in selected countries through qualified representatives.

Please visit our web site at www.altenergy.com for updated versions of all data sheets, price lists, application notes, a list of authorized distributors, and other documents that are only available online.
